# Hands-on 2

## Instructions

The exercise must be developed individually and submitted via Blackboard by **28/02/2025**. The result should be a report in *PDF* format with up to five pages.

## Description

Based on your solution for the practical work of the UC Software Architecture Requirements, i.e., the *PictuRAS System*, provide a threat model for the component responsible for user registration, authentication, and authorization. The model should contain a diagram describing the flow of data and/or control and its interaction with the other modules of the system and with external entities.
